

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Genera and Subgenera of the A. O. U. Check-List.—In the case of such purely conventional groups as genera and subgenera, utility is clearly their chief *raison d'être*, and this may be judged largely by the consensus of usage. In 1884, when the A. O. U. Committee prepared its Check-List of North American Birds, the feeling was more or less general among American ornithologists that there were too many genera current, and that the proper relationships of certain groups treated as genera were better expressed by reducing such groups to subgenera. This was evidently the feeling of the Committee, and on the conclusion of its work this feature of it was doubtless viewed with considerable satisfaction by all its members. As time passed on, however, the increasing tendency to differentiate subspecies on slight provocation naturally increased the relative value of the subgeneric groups. At the same time it became evident that the opinion of the Committee on genera and subgenera did not meet with the approval of ornithologists at large, and certain members of the Committee began to feel that the reduction of many 'genera' to the rank of 'subgenera' was illadvised. In 1892, this feeling was strong enough to lead to action, when all of the subgenera of *Trochilus* were given full generic rank, as was also *Ardetta* among the Herons. In 1896, a few other subgenera were similarly treated, while in 1898, no less than twelve subgenera were raised to the rank of full genera! Probably others would have received similar treatment had their status been formally challenged in such a way as to bring them up for action.

The matter has been recently considered by Dr. Coues, in 'The Osprey' for May, 1899,¹ where he claims that, in his judgment, "a large number of the subgenera now standing in the Check-List, require to be restored or advanced to full generic rank, and some additional subgenera need to be recognized." He gives a list of some 21 subgenera he believes should stand as genera, and some dozen subgenera are suggested as additions to the Check-List. Two new subgenera are proposed, namely *Pallasicarbo*, for *Phalacrocorax perspicillatus*, and *Psiloscoops*, type *Scops flammeola* Kaup. Doubtless Dr. Coues's opinion on the subject of genera and subgenera, as here set forth, is shared by other members of the Committee.—J. A. A.
